Summary

Self-starting, accountable Platform Engineer specializing in Kubernetes and self-service ephemeral environments. Takes platform work from design and implementation through production operations, with hands-on experience in GitOps, cloud infrastructure, and on-call reliability.

Experience

Platform Engineer, True Anomaly Feb 2026 – present

- **Demonstrated capacity for up to 1,000 concurrent environments**, with scale bounded by available cloud capacity, by building a Go-based Kubernetes operator that provisions a complete, self-contained application stack and its own database for each pull request in approximately 5 minutes.
- **Kept each preview environment current with developer changes** by refreshing it from the pull request branch on new pushes, grouping paired frontend/backend pull requests into one environment, and automatically tearing the environment down when the pull request closes.
- **Restored access to ephemeral environments** by provisioning Kubernetes Gateway API listeners, leaf certificates, HTTPRoutes, and per-environment gRPC hosts, resolving mixed-content failures.
- **Standardized service ingress** by migrating services from nginx ingress to Istio Gateway and writing the cutover guide adopted by other teams.
- **Replaced manual cluster changes with auditable GitOps** by establishing a FluxCD repository that declares desired state once and reconciles it automatically.
- **Reduced InfluxDB errors by 38%** by root-causing Grafana Flux queries and automating remediation across **200+ dashboards**.
- **Reclaimed 2+ minutes per run and 3+ hours of daily compute across 40+ workflows** by pre-installing dependencies, removing IPv6 timeouts, and adding 4/8/12-CPU runner tiers with horizontal node-pool autoscaling.
- **Secured GitHub automation across 4 organizations and 13+ repositories** by migrating from PATs to short-lived JWTs with granular permissions and remediating shell-injection and insecure-authentication patterns.
- **Expanded production alert coverage** across AKS, PostgreSQL, and storage accounts by deploying Azure Monitor and PagerDuty with reusable Terraform modules and Key Vault-managed secrets.
- **Unblocked flight-software hardware-in-the-loop testing** by limiting elevated runner permissions to the affected runners instead of granting them fleet-wide.
- **Advanced platform reliability and direction** by serving as primary DevOps on-call for production and satellite LEOP operations, automating workflows in Python and Bash, and authoring DevEx roadmap designs.

Projects

Homelab (KubeCraft) Dec 2024 – present

GitOps-managed homelab spanning bare metal, virtualization, storage, and cloud.

- **Operated 2 Talos Linux Kubernetes clusters serving 11+ applications from 280+ declarative files** using Sidero Omni, Proxmox, and TrueNAS NFS/iSCSI storage.
- **Delivered highly available PostgreSQL for 6+ clusters** using CloudNativePG with 3-instance HA, automated Barman backups, and 14-day retention.

- **Unified cluster and external-service networking** with Cilium eBPF L2 load balancing, Kubernetes Gateway API, Cloudflare Tunnels, and ExternalDNS.
- **Protected multi-cloud secrets and backups** using Azure Key Vault, Azure Blob Storage, AWS S3 snapshots, SOPS-encrypted GitOps state, and Pangolin identity-aware WireGuard access.
- **Kept infrastructure dependencies current and observable** through FluxCD reconciliation, Mend Renovate Bot, Prometheus, and Grafana.

Certificates

CKAD - Certified Kubernetes Application Developer, Linux Foundation June 2025

- Credential: https://www.credly.com/badges/aa8b881e-118c-4dcb-8f80-4e3f2de7d848/linked_in_profile

Skills

Languages: Go, Python, Bash, TypeScript/JavaScript, Ruby, SQL

Kubernetes & Platform: Kubernetes (CKAD), CRDs & operators (controller-runtime), Helm, Kustomize, FluxCD (GitOps), Istio, Cilium, Gateway API, Talos Linux, CloudNativePG, Docker

Cloud & IaC: Azure (AKS, Key Vault, Monitor, Blob), **AWS** (EC2, S3, Bedrock), Terraform, Ansible, Linux

CI/CD & Observability: GitHub Actions, GitHub Apps & GHES, Renovate, Prometheus, Grafana, Loki, InfluxDB, OpenTelemetry, PagerDuty, PostgreSQL, Jira, Confluence

Additional: Portuguese (fluent), Spanish (conversational), Korean (conversational)

Education

Actualize Coding Bootcamp, Certificate in Web Development – Remote Apr 2022 – July 2022
Four-month full-stack program in Ruby, Rails, JavaScript, Vue.js, API-driven development, and Git-based team collaboration.

Pasadena City College, A.A. Degrees in Business, Natural Sciences, Humanities – Pasadena, CA Jan 2015 – June 2018
